## Preface & Notes

This book contains information about near 1800 marinas, naturharbors and anchorages, located on the Baltic seafont and close to him. Swedish and Danish harbours at Straits (Oresund, Great and Little Belt, Kattegat and Skagerrak, Limfiord) are included.

Inland waterways are not included, ports in almost closed lagoons, like German Hiddensee, are omitted or included partially.

The information was collected from many web sites, guides and brochures, as well as during sailing trips around the Baltic and North seas in 2006 – 2019.

The work was done carefully, but of course errors are possible.

Source data also may be outdated or incorrect. Many errors have been fixed by comparison with satellite photos and nautical charts.

**WARNING: Any case, some data may be outdated or incorrect!**

Charts of approaches or fragments of satellite imagery (an arrow or other mark indicates the position) are illustrative only; do not rely on them while real navigation. Services, phone numbers, and, for example, harbor fee may change... the last, unfortunately, mostly at one direction.

The book does not have maps of harbors location, since this requires a significant increase in its volume. It is assumed that while sailing you will use the book together with your navigation system or some map service. To facilitate the work, I prepare a set of points of all harbors and anchorages mentioned in the book. To use it, your system have to allow import POI (Point of Interest) in GPX exchange format.

The ZIP packed points file can be freely downloaded here:

<http://parusanarod.ru/bib/map/baltic/boatharb.zip>

Marinas points are marked with the Marina icon. Natural harbours and guest berths for boaters, that often having minimal or no services, are marked with Beach icon (at Yours GPS unit icons may differ).

### Structure

Harbors are grouped by the Country and region and inside region listed alphabetically. Harbor numbers, if exist, are written after the name as (###).

## Naming distortion

Only basic latin letters without diacritic marks are used in GPS data files. I apologize to European users for this forced method. The issue is that many devices do not support UTF encoding. As a result for localized devices names in another language, containing accented letters are unrecognizable.

At the book correct names are used, but the Alphabet index contains names without diacritical marks. Thus, if You find on chart or some GPS device any POI name, You can easily find it also in the book.

## Services

*Fuel* means both Diesel and Gasoline (Benzine), *Diesel* – diesel only.

*All* means at least Fuel, Water, Electricity, Laundry, Toilet, Septic tank emptying, Waste disp., Shower, Sauna, Kiosk, Shop, Cafe and/or Restaurant, Wifi.

## Year-to-date

If data were checked from trusted source, or when autor visited this place, the information ends with the year of update.
